

TYPES OF PROMPTS

1. Straightforward prompting

a) Prompt:

Define velocity and give its SI unit.

Response:

Velocity is defined as the rate of change of displacement with respect to time, and it has both magnitude and direction (so it is a vector quantity).

SI unit: metre per second (m/s)

b) Prompt:

What are the steps to boil an egg.

Response:

- Place eggs in a saucepan in a single layer.
 - Add enough water to cover the eggs (about 1–2 inches above them).
 - Heat the pan on medium flame until the water starts boiling.
 - Once boiling, reduce the heat and let it simmer for:
 - 6–7 minutes for soft-boiled eggs
 - 9–12 minutes for hard-boiled eggs
 - Turn off the heat and remove the eggs.
 - Place the eggs in cold water for a few minutes (this makes peeling easier).
 - Peel and serve.
-

2. Tabularformat Prompting

a) Prompt:

Create a table comparing AC and DC current based on direction, frequency, and applications.

Response:

Parameter	AC (Alternating Current)	DC (Direct Current)
Direction	Changes direction periodically	Flows in only one direction
Frequency	Has frequency (usually 50 Hz or 60 Hz)	Frequency is zero
Applications	Used in homes, industries, power supply systems	Used in batteries, electronic devices, circuits

b) Prompt:

Provide a table comparing healthy food and junk food based on nutrients, effects on health, and examples.

Response:

Parameter	Healthy Food	Junk Food
Nutrients	Rich in vitamins, minerals, fiber, and proteins	High in sugar, salt, unhealthy fats; low nutrients
Effects on Health	Improves immunity, boosts energy, maintains fitness	Causes obesity, heart issues, low energy
Examples	Fruits, vegetables, whole grains, nuts, milk	Chips, burgers, pizza, soft drinks

3. Preceding Question Prompting

a) Prompt:

What is electric current? What is resistance?

Response:

Electric Current:

Electric current is the **flow of electric charge** (usually electrons) through a conductor.

- SI unit: **ampere (A)**

Resistance:

Resistance is the **opposition offered by a material to the flow of electric current**.

- SI unit: ohm (Ω)

Prompt:

Using these, explain Ohm's Law with a formula.

Response:

Ohm's Law:

Ohm's Law states that **the current flowing through a conductor is directly proportional to the voltage across it, provided temperature remains constant.**

Where:

- V = Voltage (volts)
- I = Current (amperes)
- R = Resistance (ohms)

👉 This means:

- If voltage increases, current increases
- If resistance increases, current decreases

b) Prompt:

What is a balanced diet? What nutrients are essential for the body?

Response:

Balanced Diet:

A balanced diet is one that provides all the essential nutrients in the right proportions to maintain health, energy, and proper body functioning.

Essential Nutrients for the Body:

- **Carbohydrates** – main source of energy
- **Proteins** – growth and repair of body tissues
- **Fats** – stored energy and insulation
- **Vitamins** – regulate body functions
- **Minerals** – support bones, blood, and other processes
- **Water** – essential for digestion and hydration

Prompt:

Using this information, create a simple daily meal plan.

Response:

Simple Daily Meal Plan:

Meal	Food Items
Breakfast	Idli/dosa with sambar, a glass of milk, and one fruit (banana/apple)
Mid-Morning Snack	Handful of nuts and a fruit
Lunch	Rice/chapati, dal, vegetable curry, curd, and salad
Evening Snack	Tea/milk with roasted peanuts or sprouts
Dinner	Chapati with vegetable curry and a bowl of dal or paneer
Before Bed	Glass of warm milk

This plan ensures a good mix of all essential nutrients for a healthy lifestyle 👍

4. Missing Word Prompting

a) Prompt:

Ohm's Law is given by the formula $V = \underline{\hspace{2cm}}$.

Response:

Ohm's Law is given by the formula:

$$V = IR$$

b) Prompt:

Drinking regularly helps maintain good health.

Response:

Drinking **water** regularly helps maintain good health 👍
